700M: supercompact and manual ...up to 2000 sqm/h

If the quality of debris and dust isn't particularly heavy (and your budget is low), the 700M is the machine you are looking for. Light in weight, of compact design and easy to transport (side brush and handle bar can be folded), the 700M offers high sweeping performance which can be matched to almost any environment by simply adjusting the pressure to the main broom.

700 EH/BH: the smallest powered unit ...up to 3500 sqm/h

Available both battery and petrol versions, the 700 is unmatched for performance and manoeuvrability in a sweeper of this size. Designed for working in smaller areas but with high productivity, the 700 combines the performance of a larger machine within the dimensions of a compact unit. Seeing is believing – this is the only way to appreciate the efficiency and sweeping speed, the ease of handling and the total control of dust thanks to the vacuum and filtering system. The easy controls and adjustment of the sweeping system complete the benefits of an excellent machine. By the way, like all Dulevo machines, the 700 standard has style – a feature we always include as standard! The 700 is available in both battery and petrol versions.

900 EH/BH: for larger areas ...up to 4500 sqm/h

Take the exceptional characteristics of the 700, add a wider sweeping path and a greater working autonomy (thanks to a larger waste debris hopper) and you have the model 900. It is intended for sweeping in areas where a greater productivity is required. The optimum weight, distribution and the two castor wheels on the front of the machine ensure unequalled manoeuvrability for its size, a most important feature for a walk-behind unit. As well as the model 700, the 900 is equipped with side broom adjustment from the operator's position and a vacuum shut-off for working in wet conditions. The 900: maximum performance and minimum effort! The 900 is available in both battery and petrol versions.

1000 EH/BH: a ride-on scrubber for wide areas ...up to 7200 sqm/h

If the area is large and the working load is high, the Dulevo sweeper 1000 has to be your choice. Developed to cover longer distances with excellent sweeping results whilst still maintaining maximum driver comfort, the 1000 is a luxury sweeper, efficient in its work and a pleasure to drive. The driving position, comfort and location of the controls have all been developed to allow long working hours without stress or fatigue. The front steering allows the machine to turn in its own length, giving it outstanding manoeuvrability. The 1000 is available in both battery and petrol versions.

1000 HD wide area, ride-on sweeper....high dump 7200 sq/h

The Dulevo traditional concept of comfort led to the HD version (High Dump) with a practical automatic hopper discharge system up to 1450 mm. Directly on board of the sweeper, the operator can easily empty the hopper even into the collection bins. Always respecting the Dulevo tradition, the sweeper 1000 HD is equipped with an efficacious cotton-polyester filtering system, well-known as the most performant filtering system for sweepers. The 1000 HD is available in both battery and petrol versions.
